1. Introduction

1.1 Problem Statement

Many students struggle to identify the most suitable learning track that matches their interests, skills, and career goals. As a result, they often spend significant time and money on courses that do not align with their abilities or future aspirations. Additionally, the increasing cost of online courses makes it difficult for learners to access high-quality educational content. There is a need for a platform that helps students make informed learning decisions while connecting them with trusted instructors and well-structured learning paths.

1.2 Purpose

The purpose of TrackFinder is to simplify the process of choosing the right learning track for students through an assessment-based recommendation system. Based on the assessment results, the platform recommends the most suitable track and provides a carefully organized learning roadmap with relevant courses offered by qualified instructors. TrackFinder also enables students to join learning communities, monitor their progress, and earn certificates, while providing administrators and instructors with efficient tools to manage educational content and platform activities..

1.3 Scope

Track Finder is a full-stack web application designed to provide a comprehensive online learning platform. It supports three user roles: Student, Instructor, and Admin, and provides capabilities including course browsing, enrollment management, content delivery, exam creation, grading, certificate issuance, community interaction, and progress tracking.

1.4 Definitions, Acronyms, and Abbreviations

Term / Acronym	Definition
SRS	Software Requirements Specification
TFS	Track Finder System
MVC	MODELS,VIEWS,CONTROLLERSS
UC	Use Case
FR	Functional Requirement
NFR	Non-Functional Requirement
CRUD	Create, Read, Update, Delete
UI	User Interface
DB	Database

UML	Unified Modeling Language
-----	---------------------------

1.5 References

- Track Finder System Scenarios, provided by project team
- UML Diagrams: Use Case, Class, ER

1.6 Overview

The remainder of this SRS is organized as follows: Section 2 provides an overall description; Section 3 details system actors; Section 4 covers use cases and scenarios; Section 5 presents functional requirements; Section 6 covers non-functional requirements; Section 7 describes the data model; Section 8 presents entity relationships; Section 9 describes the system architecture; Sections 10-12 contain UML diagrams including class, sequence, and activity diagrams.

SECTION 2 — OVERALL DESCRIPTION

2. Overall System Description

2.1 System Perspective

TrackFinder is a standalone, web-based e-learning platform developed using ASP.NET Core MVC, Entity Framework Core, and SQL Server. The system follows a layered architecture based on the Model-View-Controller (MVC) design pattern, separating the presentation, business logic, and data access layers to improve maintainability and scalability.

2.2 System Functions (Summary)

Core System Functions

- User Registration, Login, and Role-Based Access (Student / Instructor / Admin)
- Course Browsing with Search and Filters (subject, field, instructor)
- Course Enrollment and Progress Tracking
- Content Management (lessons, videos, downloadable resources)
- Assignment Submission and Grading
- Certificate Generation upon Course Completion
- Community Forums and Comments
- Payment Processing for Premium Courses
- Admin Dashboard with Analytics and System Management
- Track/Marks Management and Skill Badges

2.3 User Classes and Characteristics

Role	Technical Level	Primary Responsibilities
Student	Basic user	Browse courses, enroll, watch lessons, take exams, download resources, view certificates, join community
Instructor	Intermediate	Create/edit/delete courses, upload lessons and materials, add questions, track student progress, reply to comments
Admin	Advanced	Manage students, instructors, courses, tracks, skills, communities, reports, statistics, and issue badges

2.4 Operating Environment

- Backend: ASP.NETCoreMVC
- Database: SQLServer / EF/LQ
- Hosting: Monster
- Browsers: Chrome 90+, Firefox 88+, Safari 14+, Edge 90+

2.5 Design and Implementation Constraints

- All passwords must be encrypted using bcrypt before storage
- The system must support at least 1000 concurrent users
- Video content must be streamed via CDN for performance

2.6 Assumptions and Dependencies

- Students must have a valid email address for account registration
- Instructors are verified by Admin before course creation privileges are granted

2.7 Stakeholder Expectations

Stakeholder	Expectations
Administrator	• Easy management dashboard. • Complete CRUD operations. • Secure user management. • System monitoring.
Students	• Easy registration and login. • Personalized learning tracks. • Course enrollment. • Assessments and certificates. • Community interaction.
Instructors	• Course creation and editing. • Lesson and material management. • Assessment management. • Student progress monitoring.
Developers	• Clean MVC architecture.

	• Maintainable codebase. • Scalable database. • Easy future enhancements.
Database Administrator	• Reliable SQL Server database. • Secure data storage. • Efficient queries.

SECTION 3 — System Actors

3. System Actors

3.1 Actor Descriptions

Actor	Description
Student	End-user who registers an account, browses courses, enrolls, watches lessons, downloads resources, takes exams, views results, earns certificates, and participates in community discussions.
Instructor	Educator who creates and manages courses, uploads lesson content and materials, creates exams and questions, tracks student progress, grades assignments, and replies to student comments.
Admin	System administrator with full access. Responsible for managing students, instructors, courses, learning tracks, skills taxonomy, communities, reports, statistics, and issuing achievement badges.

4. Use Cases and Scenarios

4.1 Use Case: UC-01 — Student Registration/Login

Use Case ID	UC-01
Use Case Name	Login / Register / Logout
Actor(s)	Student
Pre-condition	Application is accessible; user does not have an existing account (for registration)
Main Flow	1. User opens registration page 2. User enters: name, email, and password 3. System validates all fields 4. System creates account with role = STUDENT 5. System redirects user to dashboard. For login: User enters credentials, system validates and issues JWT token.
Alternative Flow	A1: Email already exists. A2: Invalid credentials on login (max 5 attempts). A3: Forgot password flow via email reset.
Post-condition	User account created/authenticated

4.2 Use Case: UC-02 — View and Search Courses

Use Case ID	UC-02
Use Case Name	View Courses / Search Courses / View Course Details
Actor(s)	Student
Pre-condition	User may be logged in or browsing as guest
Main Flow	1. Student accesses the courses page 2. System displays all available courses with title, instructor, field, and duration 3. Student applies search/filters 4. System returns matching courses 5. Student selects a course to view full details
Post-condition	Student sees course listing or detailed course information

4.3 Use Case: UC-03 — Enroll in Course

Use Case ID	UC-03
Use Case Name	Enroll Course
Actor(s)	Student

Pre-condition	Student is logged in; course is available
Main Flow	1. Student clicks "Enroll" on a course 2. System checks if course is free or paid 3a. (Free) System creates enrollment record immediately 3b. (Paid) Student proceeds to payment 4. System updates enrollment status to Active 5. Student gains access to course content
Alternative Flow	A1: Student already enrolled. A2: Payment fails for paid course.
Post-condition	Enrollment record created; student can access course materials

4.4 Use Case: UC-04 — Continue Learning / Watch Lessons

Use Case ID	UC-04
Use Case Name	Continue Learning / Watch Lessons / Download Resources
Actor(s)	Student
Pre-condition	Student is enrolled in the course
Main Flow	1. Student navigates to enrolled course 2. System displays course content in order 3. Student watches video lessons or reads materials 4. System tracks progress percentage 5.

	Student can download attached resources
Post-condition	Progress updated; content consumed

4.5 Use Case: UC-06 — Create Course (Instructor)

Use Case ID	UC-06
Use Case Name	Create Course / Edit Course / Delete Course
Actor(s)	Instructor
Pre-condition	Instructor is logged in and verified
Main Flow	1. Instructor navigates to course management 2. Instructor enters course details (title, description, subject, duration, credits) 3. System validates and creates course 4. Instructor can edit or delete the course later
Post-condition	Course created and visible to students

4.6 Use Case: UC-07 — Upload Lessons and Materials

Use Case ID	UC-07
-------------	-------

Use Case Name	Upload Lessons / Upload Materials
Actor(s)	Instructor
Pre-condition	Instructor owns the course
Main Flow	1. Instructor selects a course 2. Instructor uploads video lessons or documents 3. System stores content with order/sequence 4. Content becomes available to enrolled students
Post-condition	Content uploaded and accessible

4.7 Use Case: UC-09 — Admin Manage System

Use Case ID	UC-09
Use Case Name	Manage Students / Instructors / Courses / Tracks / Skills / Communities / Reports
Actor(s)	Admin
Pre-condition	Admin is logged in with ADMIN role

Main Flow	1. Admin navigates to management panel 2. Admin can view, create, update, or delete records for students, instructors, courses, learning tracks, skills, and communities 3. Admin views statistics and generates reports 4. Admin issues achievement badges
Post-condition	System records updated; actions logged

SECTION 5 — Functional Requirements

5. Functional Requirements

5.1 Authentication & Authorization Module (FR-AUTH)

FR ID	Requirement
FR-AUTH-01	The system shall allow new users to register with name, email, and password.
FR-AUTH-02	The system shall validate the uniqueness of email during registration.
FR-AUTH-03	The system shall authenticate users via email and password .
FR-AUTH-04	The system shall implement Role-Based Access Control (RBAC) with roles: STUDENT, INSTRUCTOR, ADMIN.

FR-AUTH-05	The system shall encrypt all passwords using bcrypt before storage.
FR-AUTH-06	The system shall allow users to update their profile information.
FR-AUTH-07	The system shall provide a password reset flow using email verification.

5.2 Course Management Module (FR-COURSE)

FR ID	Requirement
FR-COURSE-01	The system shall allow instructors to create, edit, and delete courses.
FR-COURSE-02	The system shall store course details: title, description, duration, credits, subject, and field.
FR-COURSE-03	The system shall display all available courses to students with search and filter capabilities.
FR-COURSE-04	The system shall support course content of type: video, document, and downloadable resources.
FR-COURSE-	The system shall maintain content ordering within a course.

05	
FR-COURSE-06	The system shall associate courses with subjects and departments.

5.3 Enrollment Module (FR-ENROLL)

FR ID	Requirement
FR-ENROLL-01	The system shall allow logged-in students to enroll in courses.
FR-ENROLL-02	The system shall track enrollment status: Active, Completed, Cancelled.
FR-ENROLL-03	The system shall track student progress percentage per course.
FR-ENROLL-04	The system shall prevent duplicate enrollments.

5.4 Certificate Module (FR-CERT)

FR ID	Requirement
FR-CERT-01	The system shall generate certificates upon course completion with passing grade.
FR-CERT-02	The system shall allow students to view and download certificates.
FR-PAY-01	The system shall support payment for premium courses.

SECTION 6 — Non-Functional Requirements

6. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Performance	The system shall load pages within 3 seconds under normal operating conditions.
NFR-02	Performance	The platform shall support multiple users accessing the system simultaneously without significant performance degradation.
NFR-03	Performance	Database operations shall be optimized using Entity Framework Core and SQL Server.
NFR-04	Security	Only authenticated users shall be allowed to access protected resources.
NFR-05	Security	User passwords shall be securely stored using hashing techniques.
NFR-06	Security	The system shall implement authorization to restrict access based on user roles (Admin, Instructor, and Student).
NFR-	Security	The application shall protect against common web vulnerabilities such as SQL

07		Injection and Cross-Site Scripting (XSS).
NFR-08	Reliability	The system shall provide stable and continuous operation.
NFR-09	Reliability	User data shall be stored safely in SQL Server.
NFR-10	Reliability	The application shall handle unexpected errors gracefully without data loss.
NFR-11	Availability	The platform shall be available 24 hours a day except during scheduled maintenance.
NFR-12	Availability	Users shall be able to access the system using any modern web browser.
NFR-13	Usability	The user interface shall be simple, intuitive, and easy to navigate.
NFR-14	Usability	The dashboard shall provide clear navigation for administrators.
NFR-15	Usability	Forms shall display validation messages for invalid input.
NFR-16	Usability	The application shall have a responsive design compatible with desktop and mobile devices.
NFR-17	Maintainability	The project shall follow the ASP.NET Core MVC architecture.
NFR-19	Maintainability	The source code shall be modular and easy to maintain.
NFR-20	Maintainability	ViewModels shall be used to separate database entities from the presentation layer.
NFR-21	Scalability	The system shall support adding new courses, tracks, communities, and users without requiring major architectural changes.
NFR-22	Scalability	New modules and features shall be easily integrated into the existing system.
NFR-	Compatibility	The application shall support the latest versions of Google Chrome, Microsoft

23		Edge, and Mozilla Firefox.
NFR-24	Compatibility	The system shall run on Windows servers using IIS.
NFR-25	Database	The system shall use Microsoft SQL Server as the primary database.
NFR-26	Database	Entity Framework Core shall be used as the Object Relational Mapper (ORM).
NFR-27	Database	Data consistency shall be maintained through relational constraints and foreign keys.
NFR-28	Backup & Recovery	Database backups shall be performed periodically.

ERD Model

7. Data Model

7.1 Entity: User (Abstract)

Field Name	Data Type	Description
user_id	INT (PK)	Primary key, auto-generated
name	VARCHAR(100)	Full name of the user
email	VARCHAR(150)	Unique email address (used for login)
password	VARCHAR(255)	Bcrypt-hashed password
phone	VARCHAR(20)	Contact phone number
role	ENUM	STUDENT / INSTRUCTOR / ADMIN
created_at	DATETIME	Account creation timestamp

7.2 Entity: Student

Field Name	Data Type	Description
student_id	INT (PK)	Primary key
user_id	INT (FK)	Reference to User
GPA	FLOAT	Grade Point Average
level	INT	Academic level
enrollment_date	DATE	Date of platform registration

7.3 Entity: Instructor

Field Name	Data Type	Description
instructor_id	INT (PK)	Primary key
user_id	INT (FK)	Reference to User
specialization	VARCHAR(100)	Area of expertise

salary	DECIMAL(10,2)	Monthly salary
hire_date	DATE	Date joined the platform

7.4 Entity: Course

Field Name	Data Type	Description
course_id	INT (PK)	Primary key
title	VARCHAR(200)	Course title
description	TEXT	Course description
duration	INT	Duration in hours
credits	INT	Credit hours
instructor_id	INT (FK)	Reference to Instructor
subject_id	INT (FK)	Reference to Subject

7.5 Entity: Enrollment

Field Name	Data Type	Description
enrollment_id	INT (PK)	Primary key
student_id	INT (FK)	Reference to Student
course_id	INT (FK)	Reference to Course
date	DATE	Enrollment date
status	ENUM	Active / Completed / Cancelled
progress	FLOAT	Completion percentage (0-100)

7.6 Entity: Question

Field Name	Data Type	Description
question_id	INT (PK)	Primary key
exam_id	INT (FK)	Reference to Exam

text	TEXT	Question text
type	ENUM	MCQ / TrueFalse / ShortAnswer
marks	INT	Points for this question
correct_answer	VARCHAR(500)	The correct answer

7.7 Entity: Grade

Field Name	Data Type	Description
grade_id	INT (PK)	Primary key
student_id	INT (FK)	Reference to Student
exam_id	INT (FK)	Reference to Exam
score	FLOAT	Achieved score
grade_letter	VARCHAR(2)	Letter grade (A, B, C, D, F)

date	DATE	Grading date
------	------	--------------

7.8 Entity: Content

Field Name	Data Type	Description
content_id	INT (PK)	Primary key
course_id	INT (FK)	Reference to Course
title	VARCHAR(200)	Content title
type	ENUM	Video / Document / Resource
url	VARCHAR(500)	File/stream URL
order	INT	Display order in course

7.9 Entities: Payment, Certificate, Subject, Department, Comment, Field

Additional entities follow the same pattern with appropriate fields as defined in the ER and Class diagrams. Payment tracks student payments; Certificate stores earned credentials; Subject and Department organize the academic taxonomy; Comment enables course discussions; Field categorizes courses by domain.

8. Entity Relationships

Entity A	Relationship	Entity B	Description
User	Inheritance	Student / Instructor	User is abstract parent; Student and Instructor extend User
Instructor	1 : N	Course	One instructor can teach many courses
Student	N : M (via Enrollment)	Course	Students enroll in many courses; courses have many students
Course	1 : N	Exam	One course can have many exams
Exam	1 : N	Question	One exam has many questions
Student	1 : N	Grade	One student has many grade records
Course	1 : N (composition)	Content	Course owns its content; content deleted with course
Course	1 : N (composition)	Schedule	Course owns its schedule entries

Student	1 : N	Payment	One student can make many payments
Student	1 : N	Certificate	One student can earn many certificates
Subject	N : 1	Department	Many subjects belong to one department
Course	N : 1	Subject	Many courses belong to one subject
Instructor	1 : N	Assignment_Teacher	Instructor creates many assignments
Student	1 : N	Assignment_Student	Student submits many assignment submissions
Course	1 : N	Comment	Course can have many discussion comments

SECTION 9 — SYSTEM ARCHITECTURE

9. System Architecture

9.1 Technology Stack

Layer	Technology	Purpose
Backend	.ASP.NETCORE	MVC, business logic

Frontend	Js,Razorpages	Single-page application
Frontend	BootstrapCSS	UI styling and responsive design
Database	SQL server	Relational database

Class Diagram

SECTION 10 — Class Diagram

10. Class Diagram

The class diagram for Track Finder contains 16 classes organized around the User abstract class with Student and Instructor as subclasses. The central entity is Course, which connects to Content, Schedule, Exam, Subject, Comment, and Enrollment. See the attached UML Class Diagram for full details including all attributes, methods, and relationship multiplicities.

10.1 Enumerations

UserRole

EnrollmentStatus

ContentType

QuestionType

STUDENT	Active	Video	MCQ
INSTRUCTOR	Completed	Document	TrueFalse
ADMIN	Cancelled	Resource	ShortAnswer

SECTION 11 — TOOLS & TECHNOLOGIES

11. Tools and Technologies

Modeling & Design Tools Used

- draw.io (diagrams.net): for architecture, ER, and UML diagrams
- Git&Github

The Landing Page serves as the main entry point to the Track Finder platform. It introduces users to the platform's purpose and highlights its key features, helping visitors understand the available services before signing in. The interface is designed to be clean, attractive, and user-friendly, encouraging users to explore the platform and begin their learning journey.

2. Sign In

The image shows the 'Sign In' page of the Track Finder CS Learning Portal. The page has a light blue background. At the top center is the 'Track Finder' logo, which consists of a circular icon with a stylized figure and the text 'Track Finder' and 'CS Learning Portal' below it. Below the logo is a white rectangular sign-in form. The form has a title 'Sign In' and two input fields: 'Email Address' with a placeholder 'name@university.edu' and 'Password' with a placeholder 'password'. There is a 'Forgot Password?' link next to the password field. Below the input fields is a blue button labeled 'Sign Into Portal'. Below this button is a link 'NEW TO THE PLATFORM?' which leads to a 'Create an Account' button. At the bottom of the page, there is a copyright notice: '© 2026 Track Finder. All rights reserved.' and links for 'Privacy Policy' and 'Terms of Service'.

The Sign In page allows registered users to securely access their accounts. Users can enter their credentials to log in and continue using the platform based on their assigned role. Authentication ensures secure access to personalized features and resources.

The Instructor Courses page allows instructors to manage all their courses efficiently. Instructors can create, edit, and organize course content while monitoring course availability and student engagement.

9. Community

The Community page enables users to interact with other learners and instructors. Users can publish posts, share knowledge, ask questions, and participate in discussions, promoting collaboration and knowledge exchange.

10. Assessment Overview

The Assessment page introduces users to the assessment system. It allows learners to start a new assessment or review their previous assessment history, helping them evaluate their current skill level.

Answer each question to find your ideal technology track match.

Question 1 of 30

3% Complete

Question 1 of 30

Are you the type of person who expects unexpected problems?

☐ Very Agree
Strongly matches my skills and interests

☐ Agree
Generally aligns with my experience

☐ Not Sure
Neutral or uncertain about this area

☐ Disagree
Not really part of my skill set

☐ Very Disagree
Does not describe me at all

The Course Details page provides comprehensive information about the selected course, including its description, objectives, instructor information, duration, and learning outcomes before enrollment.

14. Course Materials

The Course Materials page organizes all learning resources associated with the selected course. Students can browse lessons, documents, presentations, videos, and other educational materials in a structured format.

15. Material Preview & Download

This page allows students to preview learning materials and download them for offline study. It ensures easy access to educational resources while maintaining a smooth and organized user experience.

16. Achievements (Certificates & Badges)

The Achievements page showcases the learner's accomplishments throughout the platform. It displays earned certificates and badges, motivating users by recognizing their completed courses and educational milestones.

The User Profile page contains personal information, learning statistics, achievements, and account settings. Users can update their information while viewing their overall activity and progress within the platform.

18. User Sear

The User Search page enables users to search for other platform members quickly. It provides efficient filtering and search capabilities to help users discover instructors, students, or community members.

19. Public User Profile

The Public User Profile displays information about another user's account. It includes their profile details, achievements, and public activity, making it easier for users to connect and interact within the community.

20. Admin Dashboard

The Admin Dashboard provides administrators with a complete overview of the platform. It offers quick access to management tools, platform statistics, user activities, and administrative operations through a centralized interface.

The Badge Management page enables administrators to create, edit, and organize achievement badges that are awarded to users after completing specific milestones or accomplishments.

29. Certificate Management

The Certificate Management page allows administrators to manage certificates issued by the platform. They can configure certificate templates, review issued certificates, and maintain certification records.

30. Community Management

The Community Management page provides administrators with moderation tools to monitor posts, manage discussions, review reported content, and maintain a safe, organized, and engaging community environment.
